

vSpace Management Center for the N-Series

Enterprise-Class management for NComputing access devices.

For organizations deploying NComputing desktop access devices, vSpace Management Center provides a highly scalable, flexible and easy to use single point of device management. With its web-based console, IT administrators can manage their client devices from anywhere, anytime. vSpace Management Center helps organize a deployment whether it is a single site or multiple sites – and makes it easy to perform management tasks remotely including firmware updates, batch configuration changes, device resets and more. By allowing administrators to access and manage all client devices from a single location, regardless of the size or number of deployment sites, vSpace Management Center dramatically reduces the administrative overhead needed to maintain and control their environment.

Key Features & Benefits

- **Comprehensive:** a flexible, web-based management tool for all the NComputing devices in the Citrix HDX environment.
- **Centralized:** access an entire NComputing deployment from a single console.
- **Scalable:** manage tens, hundreds, or thousands of devices across multiple networks and locations.
- **Simple:** easy to install and use with a flexible web-based user interface.

Licensing Requirements

- vSpace Management Center is licensed as a one-time fee per concurrent device to be managed.

Server Requirements

The following specifications are recommended for a standard VMC server. These may vary based on deployment size.

- 6 core i7
- 4 GB Ram
- 64 GB 7.2k RPM SATA2
- Gigabit network
- Windows Server 2008 R2

Support and Subscriptions

- Basic Support and software updates included for one year.
- Standard and Premium Support, and Subscriptions for ongoing access to upgrades available as a yearly subscription per concurrent connection managed by vSpace Management Center.

FEATURES

SUPPORTED DEVICES	N-series for Citrix HDX: N400, N500, N500w
SINGLE OR GROUP DEVICE MANAGEMENT	Push settings to provision an individual device (1:1) or use profiles for batch provisioning (1:many)
PROFILE-BASED CONFIGURATION	Assign devices to common profiles for rapid, scalable device provisioning and roll-out
ENCRYPTED MANAGEMENT	All management communication conducted between vSpace Management Center and N-Series thin clients is fully encrypted using the SSL standard.
EASY FIRMWARE UPDATES	Use the firmware update wizard to simplify device updates and scheduling
SIMPLE STATUS	Central dashboard with device online status and logging view enables rapid assessment of your environment status
CONSOLIDATED INSTALL	Install the complete vSpace Management Center via one installer in under 10 minutes
COMPREHENSIVE LOGGING	System events are continually logged to aid in troubleshooting and to confirm actions
DELEGATED ADMINISTRATION	Supports two levels of management for “view-only” and “edit-capable” access and can be easily authenticated via Active Directory/LDAP
MANAGEMENT ZONE REDUNDANCY	Deploy multiple servers to manage the same group of devices: mirror the device data for maximum management protection
